Machinery Belts of Paper.

A large establishment in this country is engaged in making belts of paper that are said to be superior in some respects to those made of leather. These are found to adhere more closely to the pulleys, and generate no electricity in running. They are best adapted for heavy driving belts, and are found to be much cheaper than leather, besides when once in position running until worn out.

A Raft for Life-Boats.

In order to prevent the accidents that so often occur when life-beats are lowered from the sides of a ship there has been invented a raft that supports the boat, and from which it is launched upon reaching the water.
